

# Agam Airi

[agam.airi@outlook.com](mailto:agam.airi@outlook.com) | +1 (647) 563 2245 | Toronto, ON | [LinkedIn](#) | [GitHub](#)

**iOS Developer** with 3+ years of experience engineering high-performance native (**Swift/SwiftUI**) and cross-platform applications. Proven track record of owning the **full iOS release lifecycle**, engineering complex native Swift bridges for IoT integrations and leveraging deep Apple frameworks (**URLSession, async/await, Codable**). A detail-driven developer focused on **clean architecture (MVVM)**, rigorous debugging and testing (**XCTest, Unit Test**) and seamless user experience.

## EXPERIENCE

### Mobile Application Developer Solaris Robots

February 2024 – Present  
Oakville, ON

Owens the full lifecycle of iOS and Android apps for robotics, IoT, and airport operations – from native plugin development to TestFlight, App Store, and Enterprise MDM release – working cross-functionally with PMs in an Agile, Jira-driven process focused on hardware integration, performance, and reliable production software.

- Led the PRMGO platform migration to **Flutter and Node.js**, scaling it to **300+ concurrent Toronto Pearson airport staff** and **1,000+ daily passenger-tracking events**.
- Built a **proprietary Swift bridge** for **IoT device telemetry**, and over the air (OTA) firmware updates to bypass cross-platform limitations for deep hardware integrations.
- Set up **Apple Notification Service (APN)** to enable push notification delivery service via **Amazon SNS**.
- Delivered Kotlin bridge for **low level UART communication**, enabling direct control of **custom Android hardware** like battery and TOF.
- **Cut** data and application **load times by 30%** across SolarX UV-disinfection robotics apps by **profiling performance bottlenecks**, using **debugging tools** and resolving critical production bugs.
- Shipped releases across the **TestFlight, App Store, Google Play, and Enterprise MDM** by owning **full-cycle deployment** and managing **Agile workflows** in Jira.
- Sustained quality over **complex system architectures** by writing **unit and integration tests** and **technical documentation**, following **clean code practices, OOP fundamentals** and proper **state management**.
- Led **peer code review** of AI-generated code, **auditing security, structure, and integrity** to **flag vulnerabilities** and guide architectural fixes across the team.

### Independent Mobile App Developer & Mentor (Freelance)

May 2023 – January 2024  
Toronto, ON (Remote)

Worked as a mobile developer on freelance and contract-style projects, while mentoring peers in core programming concepts. Developed open-source mobile and web applications, treating each build with production-grade architecture and delivery standards.

- **Shipped 10+ mobile and cross-platform** projects across **Swift, SwiftUI, Objective C and React** - from a multi-platform surveillance app to native iOS utilities in Swift, SwiftUI and Objective C.
- Mentored **5+** junior developers in **OOP principles** and **Data Structures**, facilitating measurable improvements in technical problem-solving and code quality.

## PROJECTS

- **MovieBrowser : iOS App · Swift · SwiftUI · [GitHub](#)** - SwiftUI app with MVVM, a protocol-first service layer, Core Image poster-tinted gradients (light/dark mode), multi-layer caching (NSCache + URLCache), Dependency Injection, async/await, and XCTest coverage across service, ViewModel, and persistence layers.
- **WeatherNow - SwiftUI Weather App - [GitHub](#)** - Native SwiftUI; clean error handling, loading states, and App Store ready structure. URLSession, Codable JSON parsing, MVVM (ObservableObject), AsyncImage for icons, and UserDefaults search history.
- **A.I.R.I : On-Device AI · [GitHub](#)** - Privacy-first app running LLMs fully on-device with on-device RAG, multimodal chat, voice interaction (TTS/STT), and a LAN server mode exposing an OpenAI-compatible API.
- **sfxr macOS Port : Native macOS · Objective-C++ · [GitHub](#)** - Fully native Cocoa/AppKit + Core Audio port of the classic sfxr sound-effect generator, with WAV export, .sfs load/save, and a universal binary for Intel + Apple Silicon.
- **PrepStation : iOS + macOS Video Editor · [GitHub](#)** - Non-linear video editor in Flutter with a multi-track timeline, 30+ transitions, keyframe animation, FFmpeg export, and real-time background removal powered by Apple Vision.
- **forge\_mvvm : Published Flutter Package · 200+ downloads · [pub.dev](#)** - MVVM + Clean Architecture framework on pub.dev with runtime dependency-graph validation, typed async primitives, and a CLI that scaffolds complete feature modules in one command.

## SKILLS

- **Languages:** Swift, Objective-C, Dart, Kotlin, JavaScript/TypeScript, Python
- **Apple Ecosystem:** SwiftUI, UIKit, Swift Concurrency (async/await), Combine, Core Image, Core Audio, AppKit
- **Mobile Architecture & Testing:** MVVM, Clean Architecture, Dependency Injection, XCTest, Unit & Integration Testing
- **Native Integration & Cross-Platform:** Swift/Kotlin Bridging, Native Plugin Development, Flutter, React Native
- **Tools & Infrastructure:** Xcode, Git, CI/CD (GitHub Actions, Fastlane), Apple Push Notification service (APNs), App Store Connect / TestFlight, SQLite, REST APIs, Docker, Postman, Figma, MCP servers, RAG pipelines, Firebase, Google Cloud

## EDUCATION

**Associates Diploma of Computer Programming (2 years)** - Seneca College, Toronto, ON  
**Bachelor of Business Administration with IT specialization** - Sardar Patel University, India

2022-2023  
2018-2021
